Eur. J. Biochem. 204:113-120(1992).
-1- COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.
-1- PATHWAY: DEGRADATION OF BENZOATE AND TOLUATE TO CATECHOL.
-1- SUBUNIT: THIS DIOXYGENASE SYSTEM CONSISTS OF THERE PROTEI
TWO SUBUNITS OF THE HUDROXYLASE COMPONENT (XYLX AND XYLY)
ELECTRON TRANSFER COMPONENT (XYLZ).
-1- SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING
DIOXYGENASE ALPHA SUBUNIT FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

G85898

biphenyl dioxygenase (EC 1.14.-.-) terminal oxygenase component large chain - Es. C; Species: Escherichia coli
C; Species: 16.Feb-2001 #sequence_revision 16.Feb-2001 #text_change 31.Dec-2001
C; Accession: G85998
R; Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J. iller, L.; Grotbeck, E.J.; Davis, N.W.; Lim, A.; Dimalanta, E.; Potamousis, K.; Nature 409, 529-533, 2001
A; Title: Genome sequence of enterohemorrhagic Escherichia coli O157:H7.
A; Reference number: A85480; MUID:21074935; PMID:11206551
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-453 <STO>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,

                                                                  Ωy
                                                                                                        DЪ
                                                                                                                                        Ş
                                                                                                                                                                                                                                                   CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydroxaphthalene, which cc involves contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydroxphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-c dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-c dihydroxy-1,2-dihydroxy-1,2-c dihydrophenanthrene which converted the most cells are also used in bioremediation in which they oxidise an example compound such as indene, 1,2-dihydronaphthalene, oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, c benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, cc dibenzothiophene, 9,10-dihydroxy transphthalene, biphenyl, fluorene, dibenzofuran, cc dibenzothiophene, 9,10-dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cc resin, pharmaceutical or rubber industry. The present sequence represents anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the cx exemplification of the present invention.
                                                                                                                                                                                               Query Match

                                                                                                      The present invention describes a naphthalene dioxygenase (NDO) or N related complex (I) comprising several polypeptides which contain an related complex (I) comprising several polypeptides which contain an related amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(IS,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which
                                                                                                                                                                                                                                                                                                                                                                                                             Novel naphthalene dioxygenase mutant having a specific amino substitution for preparing chiral diols for use in the polymorpharmaceutical or rubber industry and for carrying out biorer
involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxphenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which
                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Parales

The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1.2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1.4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1.4)dioxan, dibenzochiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the
